RICARDO LÓPEZ

LOGISTICS CONSULTANT

EXECUTIVE PROFILE

Logistics consultant specialising in operations optimisation and supply chain management, focused on helping organisations reduce costs, improve delivery times, and enhance overall operational efficiency.

Specialist in demand planning and inventory synchronisation, focused on ensuring product availability and business profitability through accurate forecasting models. Expert in workflow design (process architecture) and rigorous KPI control to eliminate stockouts and optimise inventory turnover.

PROFESSIONAL EXPERIENCE

2016 - 2024

Conexión e-Xperts S.A.S.

e-Project Manager

- Logistics Transformation Project Management: Led strategic operational and technological transformation projects, achieving efficient synchronisation between highly complex inventory and dispatch processes.

2003 A 2016

Cointelco S.A.

Project Management Manager

- Infrastructure and Operations Management: Led the execution of logistics and operational projects within the telecommunications sector, ensuring service continuity and efficiency in technical deployment.

1994 A 2003

Instituto Nacional de Vías - INVIAS

Inventory Assistant – Movable & Immovable Assets

- Strategic Asset Management: Led the control, inventory, and full traceability of movable and immovable assets, ensuring asset integrity and compliance with internal control regulations in the public sector.

1991 A 1994

Nacional de Eléctricos

Head of Inventory & Procurement

- Inventory Management and Data Analysis: Implemented stock control models and KPI tracking systems to reduce the risk of obsolescence and improve the accuracy of physical versus system inventory.

VALUE PROPOSITION

I help organisations to:

Stock Efficiency: Proven experience in reducing logistics costs (10%–30%) through the monitoring of safety stock levels and lead times.

Operational Synchronisation: Key liaison between the distribution centre and the client, ensuring each delivery flows with technical precision.

Forecast Accuracy: Ability to define demand and strategic supply based on the analysis of sales variations.
